

THE
CITY SCHOOL

INTERNATIONAL KINDERGARTEN & PRIMARY SCHOOL

year two coffee morning

21st August, 2026

We believe:

The formative years of childhood shape a life. We cherish them.

We envision:

A school that redefines what education can be when it is built around the child: where every child is known, understood, and valued. Where childhood is given the time and space to flourish. Where the foundations built give children the confidence to explore, to take risks, and to build lives of meaning and consequence.

We promise:

To honour each child as a born researcher, and to know who they are and how they learn.

To educate with academic rigour, and to deepen that knowledge inside Projects of research, where learning is built around your child's own questions.

To design spaces of beauty and intention where wonderings turn into discoveries.

To grow curiosity, confidence in their own voice, kindness in working with others, and the love of learning that a life is built on.

To welcome you inside that learning as our partner.

what are you excited for in year two?

what is exciting about year 2?

Transition from Year 1 to Year 2.

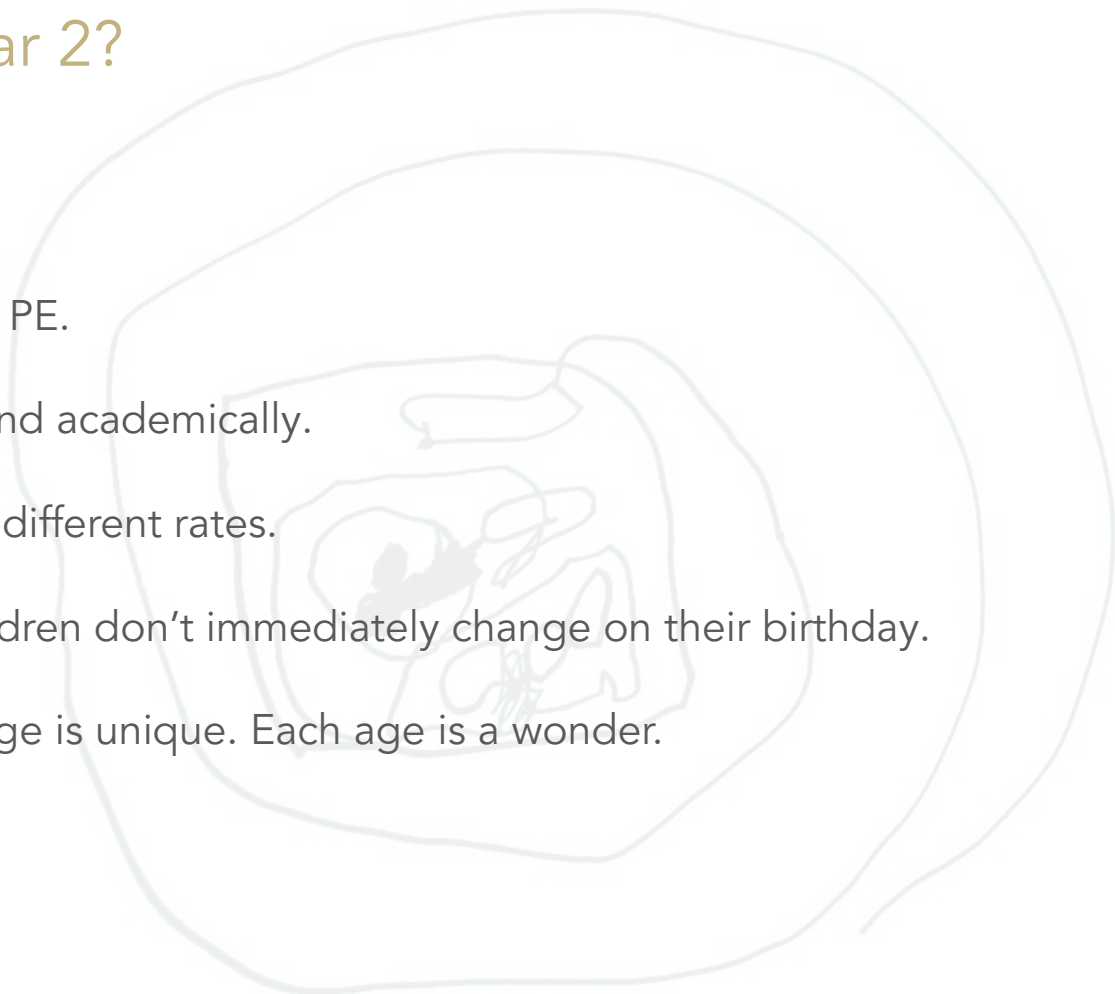

Going off campus for swimming and PE.

Development socially, emotionally and academically.

Children go through these stages at different rates.

Experiences of becoming older. Children don't immediately change on their birthday.

Enjoy your child at each age. Each age is unique. Each age is a wonder.

what do we notice in children of this age?

Six

energetic and ambitious

moods may be intense and shift
regularly

develop strong friendships, begin
talking about a best friend

rule oriented

Seven

energetic, active and curious

show more empathy than before, more
aware of their feelings and emotions

eager to learn new things, confident

rule oriented

responsive classroom

respect yourself • respect others • respect the environment • take action

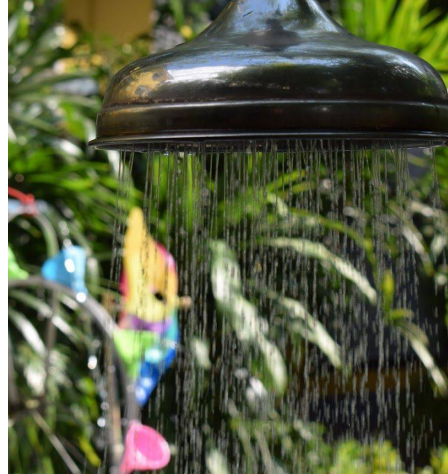

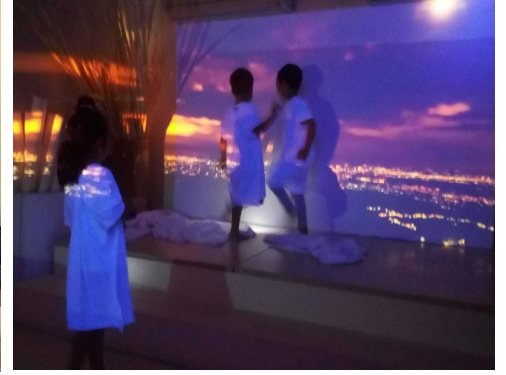

our philosophy

the image of the child

learning spaces

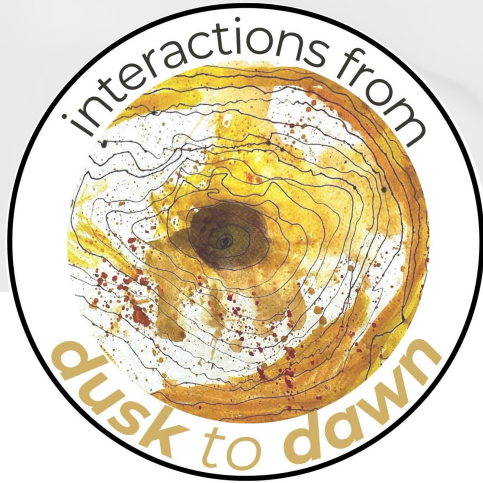

indoor
atelier outdoor

project of research
the dialogue between the visible and the invisible

What is project?

- Reggio Emilia elements
- inquiry-based approach
- multidisciplinary
- unique & authentic

overarching topics
the dialogue between the visible and the invisible

Y2 Kobus & Y2 Julie

Y2 Eric & Y2 Kayla

interactions from dusk to dawn

initial hypothesis moon

The children share their initial hypothesis about phases of the moon. Through this dialogue the concepts of light, shadow, distance and movement begin to emerge in their thinking and communication.

The light is slowly moving, when there's no light on the Moon maybe a planet is blocking it. **Kanata**

The shadow of the planet blocks it so you can only see part of it. **Zahra**

Sometimes the Moon might jump from full moon to half sometimes because it's going so fast. Then the sunlight goes through Earth. Then it goes back to normal. **Avery**

Maybe the planet is blocking it from the bottom. The planet is under the Sun. I think 3 planets are blocking the light. **Sebastian**

During Songkran it's a full Moon. I think there is one planet blocking under it. I think the sun is reflecting the light off the Moon. **Alan**

There's a planet blocking the Moon. When it's daytime it always blocks it. It could be Neptune. **Qubit**

by Qubit, Nara and Amyla

co-constructing knowledge understanding the moon

The children gather information about the Moon through texts, videos, and share their reflections. The children deepen their understanding of the Moon, revising their initial hypothesis in response to new discoveries.

The Moon is getting brighter because the sunlight is reflecting onto the Moon. **Zahra**

I think in 27 days it will be a full Moon. **James**

I think when the Moon is small like this, that it is farther away from us. **Adrien**

It is telling us about the parts of craters, I don't know if we need to know that. **Amyla**

This video is telling us more about the craters. This is the first place where the astronauts landed. **Layla**

by Avery

by John

phases of the moon exploration of light

The children explore light through the interconnected relationships of the sun, moon, and Earth. Through exploratory experiences and dialogue, they investigate their questions about moon phases, making connections of light, shadow, movement, and perspective.

question

How can a shadow copy people? **Vicky**

Why does light reflect and not have a shadow? **Zahra**

hypothesize

A shadow is when you block the light. It's different from reflection. **Kanata**

A shadow is the shape that blocks the light and the shape is the same. It gets much bigger if you move the shape closer to the light. **Ellie**

making connections

Mars is making a shadow for the moon. **Nara**

It's a shadow of something. **Adrien**
It might be a sun shadow. No, I think it is the Earth's shadow from the Sun. **Oliver**

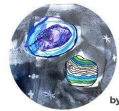

by Sebastian

making connections nature's cycles

The children then began making connections between time, shadow, and light, strengthening their understanding of the relationships between the Sun, Moon, and Earth. Through these explorations, they deepened their understanding of orientation, movement, and position, recognizing how the changing placement of celestial bodies influences light, shadows, and the rhythms of life on Earth.

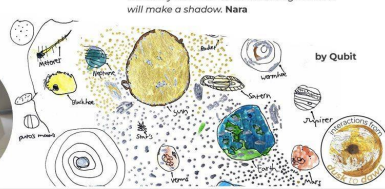

by Ellie

In the daytime there is more light than in night time. It changes during the day, right now, at 12:00pm is the best time to go out and find shadows because the sun almost makes the shadows. **John**

When it is the evening the shadows won't appear. The light in the evening is from electricity and then we block the light and it will make a shadow. **Nara**

by Rijks and Alan

by Qubit

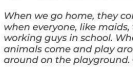

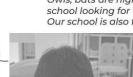

gathering evidence mapping our ecosystem

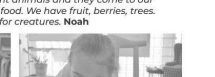

Gathering evidence of life within our environment, the children began uncovering the hidden ecosystems existing around them. Fallen fruit, tracks, bite marks, and shed snake skin became clues that revealed the presence of other living creatures. The children mapped locations to understand the invisible habitats and relationships that connect living systems within nature.

by Sebastian and Qubit

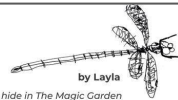

by Noah and Avery

by Emma

I think snakes will hide in The Magic Garden because there are less people. **Ellie**
Owls, bats are night animals and they come to our school looking for food. We have fruit, berries, trees. Our school is also for creatures. **Noah**

When we go home, they come out a little. Then when everyone, like mums, teachers, and the working guys in school. When they go home the animals come and play around and they dance around on the playground. **Oliver**

by Layla

circadian rhythms learning the language

The children explore how living things follow circadian rhythms, using the cycles of sunlight and darkness as cues for survival within an ecosystem. The children engage with the language that explains the Sun and Moon as natural timekeepers.

Diurnal is us, we are awake in the day and asleep at night. **John**

Crepuscular means awake at sunrise, asleep in the day, awake at sunset and then asleep in the night. **Avery**

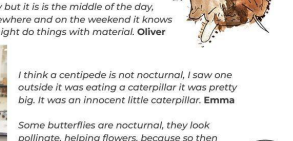

Nocturnal is awake at the night and asleep at the day. **John**

Middle of the day but it is in the middle of the day, they will go somewhere and on the weekend it knows in school. They might do things with material. **Oliver**

I think a centipede is not nocturnal, I saw one outside it was eating a caterpillar it was pretty big. It was an innocent little caterpillar. **Emma**

Some butterflies are nocturnal, they look pollinate, helping flowers, because so then people don't scare them away. **Sebastian**

Maybe on the full moon the nocturnal animals are not that active. **James**

progettazione planning learning experiences

- plan invitations and provocations
- document observations
- share and analyze in meetings
- re-launch, extend, dive deeper

literacy

speaking & listening

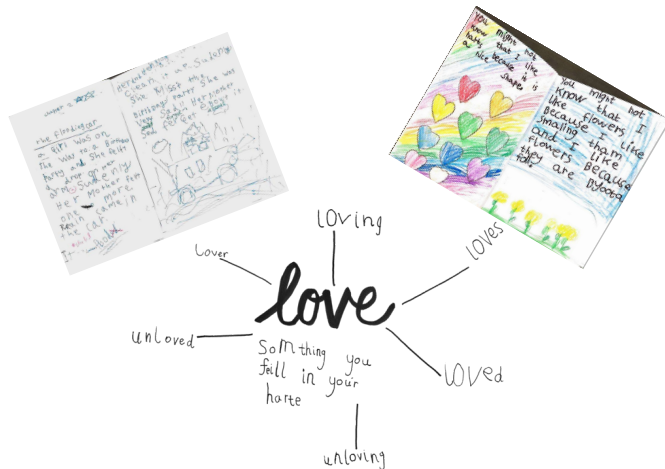

word inquiry

media literacy

reading

writing

literacy - learning outcomes

reading

- strengthening reading strategies learned and expanding on new strategies
- expansion of vocabulary
- reading stamina and fluency
- phonological awareness
- expanding their selection of media types, books and literature
- techniques - author's voice, target audiences, making connections to the text

writing

- developing and organising content
- using knowledge of form, style
- build writing stamina for book making - sentences, paragraphs
- application of conventions and presentation of work
- writing fluency
- reflecting on writing

media literacy

- identify the purpose and intended audiences of different medias
- different media forms and techniques
- create various media texts for audiences and purposes - posters, billboards, advertisements.

math in the classroom

hands on and inquiry based

maths - learning outcomes

number & operations

- read, write, represent, compose and decompose and compare numbers up to 200
- Recall of addition facts up to 20 and related subtraction
- mental math strategies for addition and subtraction up to 50
- Addition and subtraction up to 100 using objects, diagrams and equations
- fractions - sharing between 2,3,4,5,8 and 10
- Equal sharing of groups of 10's, 5's, 2's and 1's

algebra

- create patterns using various representations, including shapes, colours and numbers
- determine and explain pattern rules and extend existing patterns
- solve for missing numbers in a equations
- read/alter existing code

financial literacy

- demonstrate an understanding of the value of money
- identify different ways to represent to same amount of money

data

- collect data through experiments observations and interviews
- sort larger sets of data based on categories
- display sets of data, using one-to-one correspondence, using a variety of different graphs
- use mathematical language, to describe the likelihood of an even happening and make predictions

spatial sense

- sort and identify two-dimensional shapes
- compose and decompose two-dimensional shapes
- create and interpret simple maps

the city school scholar

igniting each child's full potential

Striving for excellence through deliberate practice in the academic
languages of mathematics and literacy

Acting for the good of self and others, doing the
right thing for the right reasons, contributing
kindness and taking action

Innovative thinking and expression to generate new
ideas and solutions. Acting holistically through design
thinking. Logical yet agile

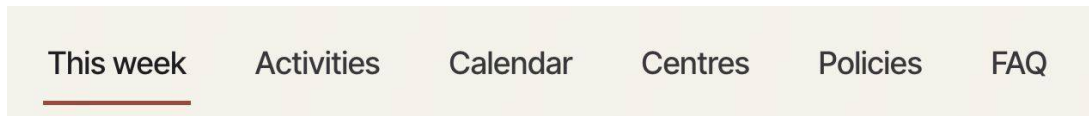

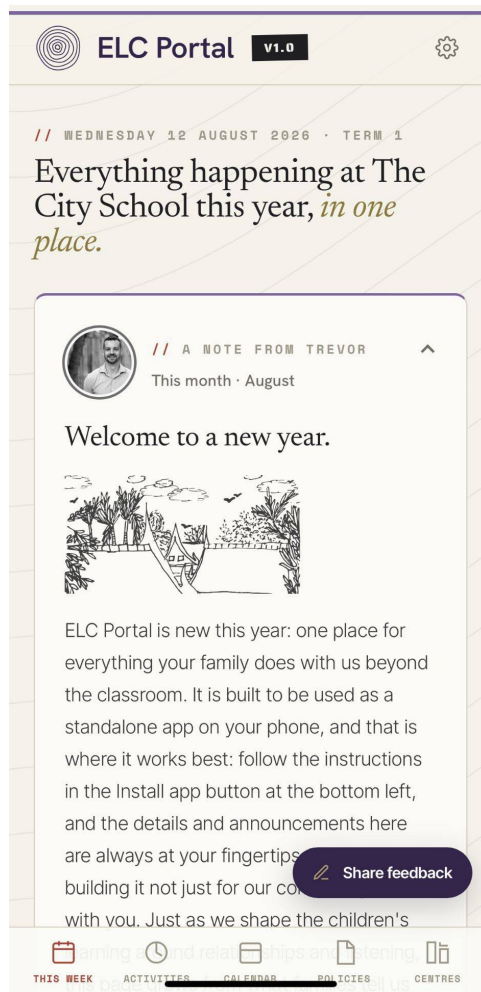

Nurturing the ability to analyze, evaluate, and
problem-solve, using research skills, thinking
routines and evidence-based dialogue

Harnessing the strengths of our
community and culture through
teamwork, a connected home/school
environment, positive relationships and
valuing diversity

Effective and ethical verbal and non-verbal communication
skills, active listening, positive interactions

whole school communication

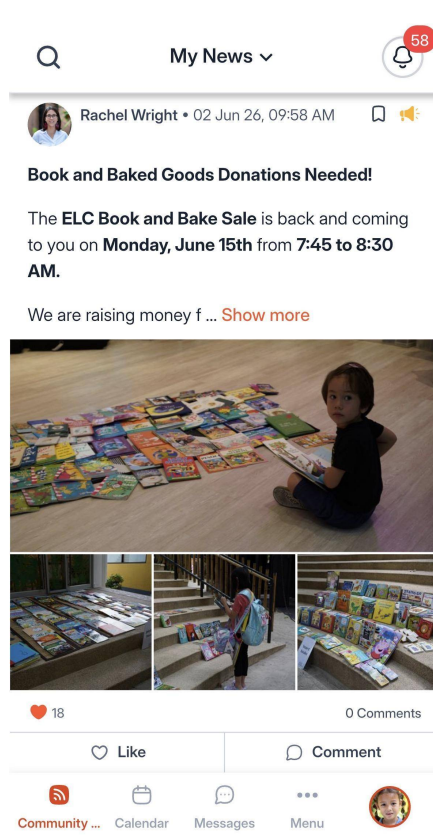

Custom built - for us, by us! ELC Portal will be your go to source for information about everything happening across all our ELC campus. Find policies, parent handbooks, signups, event registration and more!

Parent

We want you to see what's happening in our classrooms! Teachers across the school will regularly update Parent App with posts about the amazing learning your children do every day. Photos are available for you to download and keep as memories of ELC for years to come.

We recommend that you tag your child in posts on a regular basis. When a child changes year level, all the previous year's posts will disappear.

the compass initiative

supporting your learning journey from birth through to adulthood

Developed in 2024-2025, the goal of The Compass Initiative is to provide families with personalized one to one guidance on future schools, both locally and internationally, for children within our community.

The Compass Initiative addresses our community promise of parents as partners and helps reinforce all four quadrants by sharing with parents not only advice on future schooling, but how we best prepare all children for the inevitable transition.

Pippa: ELC has helped me prepare for middle school with good teamwork skills, leadership skills, and the growth mindset that has helped me throughout the year such as helping me become a student leader in my year at NIST.

getting in touch

For urgent matters, such as a late pickup, please telephone the ELC main office at: 02 3812919

Any questions feel free to contact:

Megan Bales at meganb@elc.ac.th
